

Task_Management

Create a Task Management using Spring Boot for the following Endpoints.

Save a new Task

POST - /saveTask

Request Body:

```
{
  "taskId":"12211",
  "taskHolderName":"Gowthaman M",
  "taskDate":"4/15/2021",
  "taskName":"Spring Projects",
  "taskStatus":"In Progress"
}
```

Change Task Status

GET - /changeStatus?id= <taskId>

Delete a Task

GET - /deleteTask?id=<taskId>

Get All Tasks

GET - /alltasks

Get Task by Task HolderName

GET - /getTask?id= <taskId>

Note:

Store the value in the MySQL

Install Dependencies -

mvn install -DskipTests

Create DB -

mysql -u root -protocol=tcp -p
password: examly
create database <dbname>;

Run the Project -

mvn spring-boot:run

MySQL Credentials:

username: root

Password: examly

To connect to the database run the following command in terminal

mysql -u root --protocol=tcp -p and press enter to enter the password
